

Muhammad Umar Farooq

Cross-Platform Mobile Application Developer

+92 311 8562572 | mumarfarooq.abc@gmail.com

Summary

Passionate and results-driven Mobile App Developer with over **4 years of professional experience** specializing in the design, development, and deployment of cross-platform mobile applications. Highly skilled in using a wide range of technologies including **.NET MAUI, Blazor, Java, Kotlin**, and **Android Studio** to build seamless, high-performance applications tailored to user needs.

Proven expertise in crafting scalable and user-centered solutions for diverse industries, with a strong focus on the **US market**. Adept at creating apps that combine beautiful UI/UX with robust backend architectures, ensuring a superior user experience and reliable performance.

Additionally, experienced in web application development, utilizing **React** to deliver dynamic and responsive web solutions that integrate smoothly with mobile platforms.

Known for strong collaboration skills, excellent communication, and a deep understanding of **clean architecture principles**, API integrations, cloud services, and agile methodologies. Dedicated to writing maintainable, high-quality code that meets real-world business needs and scales effectively as projects grow.

Committed to staying current with industry trends and emerging technologies, continually seeking ways to innovate and elevate project outcomes. Enthusiastic about working in fast-paced environments, contributing to team success, and delivering end-to-end solutions that make a real impact.

Education

Sukkur IBA University

BS. Software Engineering

Skills

Core Development Skills:

.NET MAUI, Blazor, Java, Kotlin, Android Studio, React, Recat Native REST APIs, JavaScript, Clean Architecture

Advanced Configuration & Customization:

UI/UX Design, Cross-Platform Optimization, Performance Tuning, State Management (MVVM), Scalability

Integration & Automation:

Firebase, Azure Mobile Services, CI/CD (GitHub Actions, Azure DevOps)

Security & Compliance:

OAuth, JWT, Auth, Data Encryption, Secure Storage

Agile & DevOps:

Scrum, CI/CD Pipelines, Automated Testing , Play Store/App Store Deployment

Cloud & Backend Services:

Firebase Realtime DB, Cloud Functions, AWS Amplify, Azure App Services,

Tools & Debugging:

Android Studio, Visual Studio , jetbrains rider. VS Code, Git, Azure , Xcode

Performance Analytics, Advanced Reporting & Continuous Improvement: Dashboards, Troubleshooting,

Performance Tuning, Problem Solving

Work experience

Lci Systems

12-2022 - present

Cross-Platform Mobile Application Developer

- Led the implementation of advanced features for enterprise-level clients
- Designed and implemented scalable mobile solutions (.NET MAUI, Blazor, Android) for clients across industries, Designed and developed user-centric Android applications with a focus on customization, utility, and engagement.
- Led full-cycle development from concept to deployment, ensuring high performance, intuitive UX, and cross-device compatibility.
- Integrated real-time data APIs and local storage for offline functionality, enhancing reliability.
- Optimized app performance through efficient memory management and battery-friendly practices, reducing crash rates.

Funzoft

2018-07 - 2022-11

Android Application Develop

- Specialized in orchestrating integrations with third-party systems
- Customized and optimized modules for performance and scalability
- Implemented security best practices, including access control and data encryption
- Played a key role in the platform's performance optimization efforts
- Collaborated with cross-functional teams for seamless delivery and integration of solutions

Skills Used: Android SDK, Java, Kotlin, UX/UI Design, API Integration (REST), Local Storage (SQLite), Performance Optimization, Agile Development

True Muslim App Studio

2015-02 - 2018-07

Android Application Develop

- Developed religiously-focused Android applications serving over 1M+ users worldwide with 4.7+ average ratings on Google Play
- Pioneered offline-first mobile solutions using advanced capabilities like ML Kit and custom animations
- Integrated cutting-edge technologies (machine learning, gesture controls) while maintaining lightweight app performance
- Designed intuitive religious study tools with personalized user experiences

Skills Used: Android SDK, Java, Kotlin, UX/UI Design, API Integration (REST), Local Storage (SQLite), Performance Optimization, Agile Methodologies.

PROJECTS

EC:

EC is a US-based app developed for custodians to manage and log daily cleaning tasks, including routine, periodic, and ad-hoc activities. Custodians use the app to record completed work, keeping managers updated in real time. Salaries are calculated based on the logged tasks, ensuring accurate and transparent payroll. Retail Customer Service Portal: Designed and developed customer service portal handling 20,000+ daily interactions with 99.9% uptime and 90% improvement in customer satisfaction scores

FMO Ticketing:

FMO Tracking is a US-based app designed for Field Maintenance staff to manage and resolve client queries efficiently. It allows technicians to log time spent, update ticket statuses, and keep the company informed in real time. This helps streamline field operations and improves service tracking and accountability.

CREA:

A route time calculation app built for US-based drivers to track daily tasks and calculate salaries accurately. Installed on drivers' devices, it improved company efficiency by 60–70% through real-time task logging. All driver activities are recorded and synced with the server for analysis and payroll processing.

Enterprise Insights Agent:

This app, already developed by a team of U.S. developers, tracks device usage and uploads data to a server. My goal is to add a few screens that calculate total charge time, battery health, and battery life expectancy. The main purpose of the app is to monitor and upload the usage data of applications on Google devices to a server.

Postal Go:

Postal Go is a US-based project designed to provide users with a complete solution for managing their packages. With Postal Go, users can easily create package groups, print labels for individual packages or entire groups, add packages for tracking, and receive real-time notifications on tracking events.

The app also helps calculate shipping prices, locate the nearest postal office, and print receipts directly on a specific device.

Postal Go brings convenience and simplicity to both personal and business shipping needs — making it easier than ever to manage and track your packages.

FYP, Parking Management System:

Smart Parking Management System is an Android-based app that helps drivers easily find and reserve available parking spots. The app offers a user-friendly interface for drivers and an admin panel for managing parking spaces efficiently. It streamlines the entire parking process, reducing hassle and saving time for both users and administrators.

Digital Clocks:

Digital Clocks is a customizable clock app featuring various types like country clocks, animated clocks, digital, and analog displays. Users can set background images or colors, adjust clock size, and change text color for digital clocks. The app offers a flexible and personalized clock experience tailored to user preferences.

Ramadan Calendar:

Ramadan Calendar is a beautifully designed app that provides accurate Sahoor, Iftar, and prayer times for locations worldwide. Trusted by over **1M+ users** and rated **4.7+ stars**, it also offers a rich collection of daily Duas, Azans, and full Quran access to deepen your spiritual experience. Enhance your Ramadan journey with custom greeting cards for each day of the holy month and for Eid, perfect for sharing blessings with loved ones.

Translation App:

Translation App uses ML Kit to translate text into multiple languages with offline support after downloading language models. It allows users to translate text from images, save translation history, and mark favorites for quick access. The app ensures fast and reliable translation even without an internet connection.

Quran App:

Quran App is a beautifully crafted mobile app that lets you read the Holy Quran with smooth, curl-style page-turn animations for a real book-

like experience. You can easily bookmark any page, toggle between viewing with or without translations, and return to your saved spots anytime.

Designed for clarity and comfort, the Quran App helps you stay connected to your recitation journey with an intuitive, elegant interface — making every moment of reading more meaningful and seamless.
